SUMMARY

Senior software engineer helping teams deliver cloud-native systems at scale — leading architecture, mentoring developers, and driving platform modernization across CRM, lead-gen, and distributed applications. Decades of production delivery with C#, .NET, and Azure; currently building agentic AI infrastructure (MCP servers, multi-agent orchestration) alongside microservices, event-driven systems, and CI/CD.

TECHNOLOGY

Languages & Frameworks: C#, .NET / ASP.NET Core / MVC, Windows Forms, MediatR, Python, PySpark, Angular, TypeScript, JavaScript, SQL

Cloud & DevOps: Azure App Services, Azure Service Bus, Application Insights, Azure DevOps, AWS Elastic Beanstalk, Docker, CI/CD, microservice architecture, event-driven systems

Data: SQL Server, Entity Framework Core, MongoDB, stored procedures

APIs & Integrations: REST / Web API, SignalR, Twilio, CXOne, Cordial, SMTP/EWS, SFTP

AI & Agentic Systems: MCP server development (Model Context Protocol), multi-agent orchestration, LLM tool/function-call integration, Anthropic API, local LLM deployment (LM Studio), agentic workflow design, Roslyn code analysis.

Web & Platform: HTML5, CSS, Bootstrap, JQuery, IIS, Windows Services

EXPERIENCE

Groundworks – Senior Software Engineer – Remote

Jul 2022 – Mar 2026

- Led a distributed team of 4 developers as a senior engineer, owning sprint planning, code review standards, and delivery; Shipped with every sprint, on a bi-weekly schedule.
- Architected and delivered Azure-based CRM applications and services, modernizing the platform across multiple web generations (ASP.NET MVC through React/TypeScript, C# backends) and handling tens of thousands of customer interactions daily across integrated phone, email, and SMS channels.
- Designed and built real-time lead routing engines, distributing inbound leads to CXOne, Cordial, and Twilio. Reduced lead response time from 12-15 min to 2 minutes for processing 10000 leads/day.
- Established backend architecture patterns adopted across: event-driven microservices on Azure App Services and Service Bus, SQL Server, Docker, and CI/CD pipelines. (We established the CI/CD pipelines, first in BitBucket, later in Azure.)
- Partnered with Marketing on iterative lead-gen optimization, contributing to 50% growth in qualified leads / supporting over a billion per year. (125M at start to a billion-dollar year in 2025.)
- Selected as cross-team contributor for company-wide platform modernization: delivered Angular/EF Core features on the Frontend team, then built Python/PySpark ETL pipelines in the Data Engineering team.

CryptoSlam, Inc. – Senior Software Engineer – Remote

Feb 2022 – Jun 2022

- Built and deployed .NET Core APIs and web applications to Linux AWS Elastic Beanstalk environments via Bitbucket CI/CD pipelines.
- Applied MS SQL, MongoDB, and NoSQL data patterns in a fast-moving startup environment with Jira-driven sprint cadence.

Zenalytics, LLC. – .NET Developer (Part-Time) – Remote

Jan 2019 – Feb 2022

- Developed a custom MS SQL database to consolidate ad server logs and produce key analytical exports supporting media campaign reporting.

Blue Sky MLS, LLC. – Software Development Lead – [Location]

May 2015 – Sep 2018

- Hired, onboarded, and led a 4-developer team, running sprint planning and delivery for all client-facing products.
- Designed and built the company's core product: a sales aggregation engine that ingested trade feeds from major brokers, including BNY Mellon and Schwab, computing regulatory figures for blue sky permit filings across all 50 states and U.S. territories.
- Developed automated sales data feed ingestion (scheduled SFTP, database integration), replacing manual imports and feeding the aggregation engine daily.
- Implemented electronic state filing integration via the Blue Express API, plus an online registration ordering platform (C#, ASP.NET, SignalR, SQL Server).

ALM Media, Kenexa (IBM via acquisition) – Senior Developer → Lead Developer – 120 Broadway, NY, and Lincoln, NE - Philly, PA - Remote

May 1997 – Mar 2015

- Primary developer of MA3000, a legal case management, calendaring, and rules-based scheduling suite used by major NY law firms. (Delphi, C#, MS SQL) and HR platform products Selector, Portrait, and TouchScore (Delphi, VBScript, MS SQL).

PROJECTS

WeaversGuild github.com/mmeents/WeaversGuild

- AI agent orchestration platform modeling a virtual organization as desks, roles, and task queues over a graph-based knowledge store — LLM operators (Claude, Claude Code, or local models via LM Studio) claim, execute, review, and hand off work autonomously. C#/.NET, EF Core, SQL Server, MCP.

Storytime github.com/mmeents/Storytime

- Multi-agent narrative pipeline orchestrating Claude and local LLMs through sequential creative roles (writer → editor → reviewer) to produce complete prose deliverables; published output on [Medium](https://medium.com).

DaemonsMCP github.com/mmeents/DaemonsMCP

- MCP tool server giving LLMs secure, structured access to codebases: Roslyn-based C# parsing, hierarchical documentation nodes persisting context across sessions, hot reload. Used daily in development workflows, Angular admin UI.

EDUCATION

University of Nebraska–Lincoln – Computer Science coursework, 1991-1997
